## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, 16, 18, 22, drawn to a method for manufacturing a molecular film pattern, classified in class 430, subclass 322.
  - II. Claims 15, 17, 19-21, 23, drawn to a pattern or device, classified in class 430, subclass 9.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process, such as by etching or selective deposition. The product claims are written as product-by-process claims and therefore may be made by any method. See MPEP 2113.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. This application contains claims directed to the following patentably distinct species of the claimed invention: a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (1), a

method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (2), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (3), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (4), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (5), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (6), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (7), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (8), a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (9) and a method for making a molecular film pattern wherein an organic silicon compound has a chemical structure represented by formula (10).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
